Petersen House - Washington, DC

Historic Restoration of House Where Abraham Lincoln Died in 1865

OWNER: U.S. National Park Service

ENGINEER: Oehrlein Associates & Architects

The Peterson House in Washington, DC is the historic site where President Abraham Lincoln died in April 1865, just nine hours after he was shot across the street at the Ford Theatre.

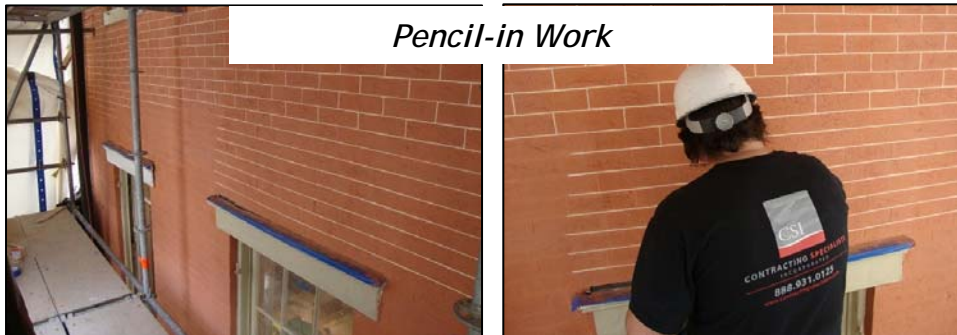

The building is now owned by the U.S. National Park Service (NPS) and preserved as a museum.

CSI performed these restoration and repair services to this historic landmark:

- Isolated repointing, removal & replacement of brick
- Façade cleaning
- Restoration/resetting of brownstone steps, Dutchman repairs
- Application of mineral coating to exterior masonry surfaces and penciling-in of mortar joints
- Removal and resetting of brick pavers

CSI was also asked to perform additional work to correct latent deficiencies uncovered during the construction process.

This richly-historic and aesthetically significant project was greatly influenced and monitored by the architectural community. The CSI Team took delicate care in preserving the building's historic fabric and successfully provided a functional repair and restoration solution.
